

File Format

In order to simplify the purchase process, our platform will accept various types of files, however we **recommend sending PDF files**, without any password protection.

If the dimensions of the submitted file do not correspond to the product, our team will make the necessary adjustments for the chosen format.

Page ordering

The file must contain all the individual pages, that is, they are separated and organized in the reading order.

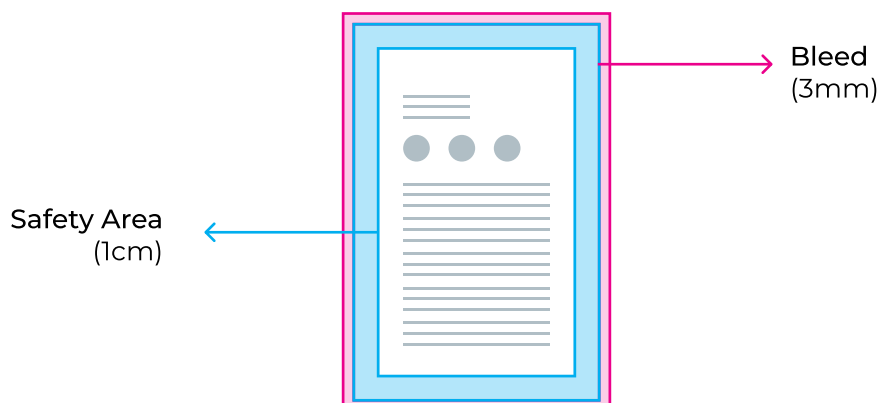

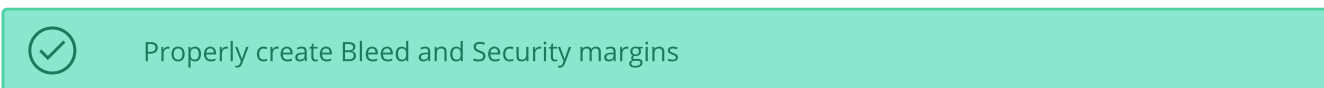

Margins

- Bleed

The design must take into account a bleed margin of 3 mm all around.

- Safety Area

To ensure that there will be no cropped or unreadable elements after the binding, we suggest that all texts and images are at least 1 cm away from the edge of the safety area.

Colors

The file should be sent in **CMYK**, preferably with the color profile **FOGRA39 or ISO Coated v2 ECI**, if it is in RGB or Pantone it will be automatically converted, which may generate unexpected color variations.

Resolution

The file must be **sent** with a resolution of **300 DPI or higher**, any lower resolution may cause noise or pixelation in the production of the final product.

Sources

To avoid missing text or styles, all fonts must be incorporated into the file or converted to curves.

Number of pages

The number of pages chosen during the purchase represents the maximum limit, that is, if the file sent contains less than the number chosen, only those pages will be printed.

If the number of pages sent is odd, the final product will contain blank pages.

Cover

For **products with a spine**, an additional file must be submitted with:

- Two pages for the cover fully open, one of which must represent the outside and the other the inside, maintaining the necessary safety and bleed margins.

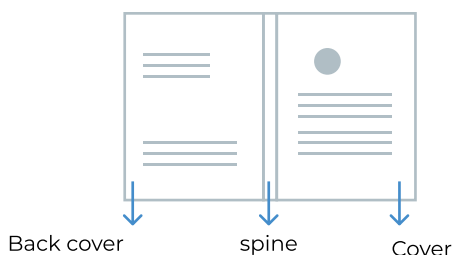

The pages must contain an area for the spine, taking into account the width described on the Upload page.

Note: In the center of the inside of the cover, there will be an area of about 3 mm on each side of the spine, where the design should be blank, since it will be the area glued during the binding process.

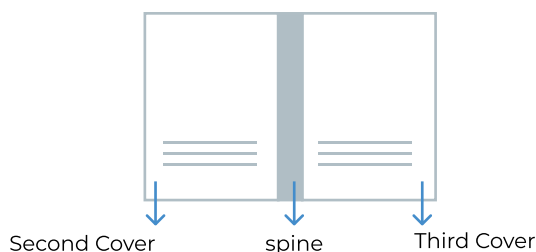

Properly create Bleed and Security margins

Outer cover

Inner cover

Spine

The product's spine width will be displayed after starting the purchase. It will be visible in the following location:

Upload File

Submit Files

Submit or drag to this zone the file you are going to use

Format **.pdf, .png, .tiff, .jpeg**

Maximum size: **15 Mb**

Send us your file via WeTransfer

File uploaded

Note: The size of the spine will be **2 mm** ? → Spine

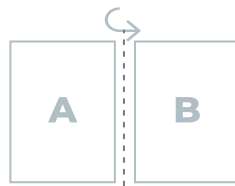

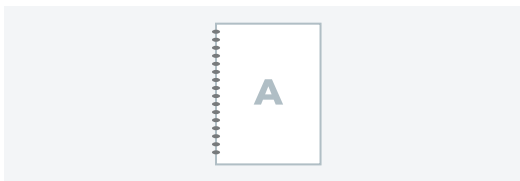

No submitted files

Binding positioning

When choosing the location of the binding, the orientation of the cover must be taken into account, as it will vary according to the option selected.

In products with a fully personalized core, the orientation of the content will be decided by the submitted design.

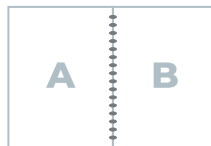

Binding on the left side
